Approval body for construction products and types of construction

Bautechnisches Prüfamt

An institution established by the Federal and Laender Governments

Designated according to Article 29 of Regulation (EU) No 305/2011 and member of EOTA (European Organisation for Technical Assessment)

European Technical Assessment

ETA-20/0533 of 17 April 2021

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the European Technical Assessment:	Deutsches Institut für Bautechnik
Trade name of the construction product	Capsule Adhesive Anchor VZ
Product family to which the construction product belongs	Bonded anchor for use in concrete
Manufacturer	MKT Metall-Kunststoff-Technik GmbH & Co. KG Auf dem Immel 2 67685 Weilerbach DEUTSCHLAND
Manufacturing plant	Werk 1, D
This European Technical Assessment contains	15 pages including 3 annexes which form an integral part of this assessment
This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of	EAD 330499-01-0601 Edition 04/2020

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The "Capsule Adhesive Anchor VZ" is a bonded fastener consisting of a glass capsule VZ-P and a threaded rod V-A according to Annex A1.

The glass capsule VZ-P is placed in the hole and the threaded rod V-A is driven by machine as specified in Annex B4.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex C1 to C2, B2
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C1, C3
Displacements under short-term and long-term loading	See Annex C4
Characteristic resistance and displacements for seismic performance categories C1 and C2	No performance assessed

3.2 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330499-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 17 April 2021 by Deutsches Institut für Bautechnik

Capsule Adhesive Anchor VZ

Product description
Materials

Annex A3

Deutsches Institut für Bautechnik DIBt

Specifications of intended use

Anchor size		M8	M10	M12	M16	M20
Static or quasi-static action		✔				
Base materials		compacted, reinforced or unreinforced normal weight concrete without fibers acc. to EN 206:2013+A1:2016				
		strength classes C20/25 to C50/60, acc. to EN 206:2013+A1:2016				
		cracked or uncracked concrete				
Temperature range I	-40°C to +40°C	max long term temperature +24°C; max short term temperature +40°C				
Temperature range II	-40°C to +80°C	max long term temperature +50°C; max short term temperature +80°C				

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions: all versions
- For all other conditions corresponding to corrosion resistance classes CRC according to EN 1993-1-4:2015, Annex A, Table A.2:
  - V-A A2: CRC II
  - V-A A4: CRC III
  - V-A HCR: CRC V

Design:

- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work
- Anchorages are designed according to EN 1992-4:2018 or TR 055, version February 2018

Installation:

- Dry or wet concrete
- Making of drill hole by hammer drilling, compressed air drilling or vacuum drilling
- Installation direction: D3 - downwards, horizontally and upwards (e.g. overhead) installation

Installation instructions

Drilling			
1			**Hammer drill or compressed air drill:** Drill the hole with diameter and depth according to Table B1. Continue with step 2.
			Vacuum drill: see Annex B2 Drill the hole with diameter and depth according to Table B1. Additional cleaning is not necessary - continue with step 3.
Cleaning			
2		Drill hole must be cleaned directly before installation of the anchor, or it must be protected against recontamination in a suitable manner until installation of the anchor.	
	2a		Blow out the drill hole completely at least **2x** from the bottom of the drill hole with blow-out pump or compressed air.
	2b		Brush the drill hole **2x** with Cleaning Brush RB (Table B1). Observe and check brush diameter $d_{b,min}$. When inserting the brush into the drill hole, a clear resistance must be noticeable. Otherwise use a new Cleaning Brush.
	2c		Blow out the drill hole completely at least **2x** from the bottom of the drill hole with blow-out pump or compressed air.

Installation instructions

Annex B3

Deutsches Institut für Bautechnik DIBt

Installation instructions - continuation

Inserting the threaded rod		
3		Insert the capsule into the drill hole.
4		Drive in the anchor rod using a hammer drill set on rotary impact. Stop immediately after reaching the setting depth.
5		Observe curing time according to Table B3. Do not move or load the anchor until it is fully cured.
6		Remove excess adhesive.
7		Install fixture and apply installation torque T_{inst} according to Table B1.
